# 1. Welcome to AeroLog Ultimate

AeroLog Ultimate is a complete digital pilot logbook designed for pilots, students, and certificated flight instructors (CFIs). It replaces a paper logbook with a private, on-device record of your flights, aircraft, currency status, training progress, and instructor endorsements.

AeroLog Ultimate is built around four core areas:

- **Logbook** — record every flight with times, landings, approaches, fuel, and remarks.
- **Currency** — automatically track FAA recency requirements (61.57 experience, flight review, IPC, medical) so you always know your status at a glance.
- **Training** — for CFIs, manage students, syllabi, and training progress; for students, track your own progress toward a certificate or rating.
- **Reports** — generate summaries and exports of your flight history for insurance, job applications, or your own records.

**Note:** All of your data is stored privately on your device. AeroLog Ultimate does not require an account or an internet connection to function.

## 2. Getting Started

### First Launch

The first time you open AeroLog Ultimate, the app automatically creates your primary pilot profile and loads a full set of built-in currency requirements (day/night passenger-carrying, instrument currency, flight review, IPC, medical, and more). You do not need to set anything up before you can start logging flights.

### Main Navigation

AeroLog Ultimate is organized into tabs:

- **Logbook** — your flight history, newest first.
- **Aircraft** — every airplane, helicopter, glider, or simulator you fly.
- **Currency** — your recency status across every tracked requirement.
- **Training** — student and syllabus management (CFI) or your own training progress (student).
- **Reports** — build and export summaries of your flight history.
- **Settings** — your pilot profile, preferences, and data management tools.

### Recommended First Steps

- Go to **Settings** → **Pilot Profile** and enter your name and certificate number.
- Go to **Aircraft** and add the aircraft you fly regularly.
- Log your most recent flight from the **Logbook** tab to see currency calculations populate.

## 3. Your Pilot Profile

Your pilot profile stores your identity and certificate information, and is used throughout the app for reports, exports, and CFI features.

### Editing Your Profile

Go to **Settings** → **Pilot Profile** to edit:

- First and last name
- Pilot certificate number
- Home base airport (ICAO identifier)
- CFI status and CFI certificate number, if applicable

Tap **Save Profile** when finished.

### Recency Dates

Separately from your basic profile, **Currency** → **Options (■)** → **Pilot Recency Dates** is where you record the dates behind your currency calculations:

- Medical certificate class and expiration
- Most recent flight review (BFR) date
- Most recent Instrument Proficiency Check (IPC) date
- CFI certificate expiration, if you are an instructor

**Note:** Enabling "I am a CFI" in either your Pilot Profile or your Recency settings unlocks the Training tab's instructor features, including adding students and issuing endorsements.

## 4. Managing Aircraft

The Aircraft tab holds every aircraft, training device, or simulator you log time in.

### Adding an Aircraft

Tap the + button from the Aircraft list or directly from the flight editor's aircraft picker. Enter:

- Registration (tail number) — required
- Make and model — required
- Category and class (airplane, rotorcraft, glider, etc.)
- Capabilities: complex, high performance, tailwheel, retractable gear, pressurized
- Whether the aircraft requires a type rating
- Performance notes: cruise speed, best glide speed, fuel capacity, and default fuel burn

### Searching and Filtering

Use the search field at the top of the Aircraft list or the in-flight aircraft picker to filter by registration, make, or model. Only **active** aircraft appear in the picker — inactive aircraft (sold, retired, or no longer flown) are hidden from flight entry but remain in your history for existing flights.

### Simulators and Training Devices

AeroLog Ultimate supports logging simulator time separately, with classification levels (BATD, AATD, FTD, FFS) so simulator hours are tracked distinctly from aircraft time in your totals and currency calculations where applicable.

## 5. The Logbook

The Logbook tab is your flight history. Each entry captures everything needed for a complete, audit-ready pilot logbook.

### Creating a Flight Entry

A flight entry is organized into sections:

- **Basics** — date, aircraft, route, and pilot role (PIC, SIC, dual, solo, etc.)
- **Times** — total time, PIC, SIC, dual received/given, cross-country, night, actual and simulated instrument time
- **Landings** — day and night landing counts
- **Approaches** — instrument approach type, count, and airport for each
- **Legs** — for multi-leg flights, break down times and routing by segment
- **Conditions** — day/night split and weather conditions flown
- **Hobbs/Tach** — start and end readings, where the aircraft tracks them
- **Fuel** — fuel added and cost, for expense tracking
- **Weight & Balance** — quick weight and balance check for the flight
- **Expenses** — rental, fuel, landing fees, and other costs tied to the flight
- **Training** — syllabus lesson reference and instructor endorsement, for dual instruction
- **Remarks** — free-text notes
- **Attachments** — photos or documents (e.g. a weather briefing or fuel receipt) attached to the flight

### Editing and Deleting

Tap any flight in the Logbook list to open it for editing. Swipe left on a flight in the list to delete it. Deleting a flight recalculates your totals and currency status automatically.

## 6. Currency & Recency

The Currency tab is your at-a-glance dashboard for FAA recency requirements — pilots commonly call this "currency," referring to staying current under 14 CFR 61.57 and related regulations, not anything financial.

### Reading the Dashboard

At the top, a summary shows counts of items that are:

- **Current** — green — you meet the requirement today
- **Expiring** — orange — approaching its limit and needs attention soon
- **Expired** — red — the requirement is not currently met
- **Setup** — yellow — not enough information yet to calculate (usually needs a recency date entered in Settings)

Requirements are grouped into:

- **FAA 61.57 — Flight Experience:** passenger-carrying currency (day/night), instrument currency, tailwheel currency
- **Certification & Recency:** flight review, IPC, medical certificate, CFI certificate
- **Aircraft Proficiency:** complex, high performance, and type rating currency
- **Custom:** any currency items you've defined yourself

### Viewing Details

Tap any currency item to see a detailed breakdown: your progress toward the requirement, the specific qualifying flights/events that count toward it, the lookback window being used, and — if you're not current — exactly what's needed to regain currency.

### Adding a Custom Currency Requirement

From **Currency** → **Options** (■) → **Add Custom Currency**, you can define your own tracked requirement — useful for insurance minimums, employer-specific recency rules, or personal proficiency goals beyond the FAA baseline.

## 7. Training & Endorsements (CFI Features)

If your pilot profile is marked as a CFI, the Training tab unlocks instructor tools for managing students and issuing endorsements.

### Adding a Student

From the Training tab, tap **Add Student** and enter:

- First and last name
- Training goal (e.g. Private Pilot, Instrument Rating, Commercial)
- A syllabus — choose a built-in syllabus matched to the goal, or select one of your own custom syllabi

### Custom Syllabi

Build your own training syllabus from **Training** → **Syllabi** if the built-in options don't match your training program. Custom syllabi can then be assigned to any student.

### Endorsements

AeroLog Ultimate includes a library of standard FAA endorsement templates (pre-solo aeronautical knowledge, solo flight, checkride recommendation, and more), plus support for fully custom endorsement templates.

- Select a student and an endorsement template from the **Endorsements** list.
- Review or edit the endorsement text.
- Capture the instructor's signature directly on-screen.
- The signed endorsement is stored with the student's record and can be exported or shared.

### CFI Inbox

The CFI Inbox surfaces endorsements awaiting your signature and recent training activity across all of your students in one place.

## 8. Reports

The Reports tab builds formatted summaries of your flight history — useful for insurance applications, job applications, or personal recordkeeping.

### Building a Report

- Choose a date range or select "all time."
- Choose which totals to include (PIC, dual, cross-country, night, instrument, landings, etc.).
- Preview the report before saving or exporting.

### Saved Reports

Reports you build can be saved for later reference under **Saved Reports**, so you don't have to rebuild the same report each time you need it.

## 9. Backup, Restore & Data Import

Because AeroLog Ultimate stores your logbook privately on your device, regular backups are strongly recommended.

### Backup & Restore

From **Settings** → **Backup & Restore**, you can create a complete backup of your logbook, aircraft, currency data, students, and endorsements. Restoring from a backup replaces your current data with the backup's contents — restore with care.

### Importing an Existing Logbook

If you're moving from another logbook (paper or digital), **Settings** → **Import Logbook** walks you through bringing your flight history into AeroLog Ultimate.

### Exporting Your Data

Export options let you take your data out of AeroLog Ultimate at any time — your logbook is always yours.

## 10. Settings

The Settings tab is home to:

- **Pilot Profile** — your identity and certificate information
- **Display Preferences** — units, date/time formats, and display options
- **Data Management** — backup, restore, import, and export
- **Export Options** — choose formats for sharing your data

## 11. Troubleshooting & FAQ

**Q: A screen doesn't seem to save my changes.**

A: Make sure you tap the explicit **Save** button or option before leaving a screen. If a problem persists after saving, try force-quitting and reopening AeroLog Ultimate, then check whether your change was retained.

**Q: Currency shows "Setup" instead of a status.**

A: This means AeroLog Ultimate doesn't have enough information yet to calculate that requirement — usually a missing date in **Currency** → **Options** → **Pilot Recency Dates**, or no qualifying flights logged yet.

**Q: I can't add a student.**

A: Adding a student requires your pilot profile to be marked as a CFI. Confirm **"I am a CFI"** is enabled in your Pilot Profile settings.

**Q: Where is my data stored?**

A: All flight, aircraft, training, and profile data is stored privately on your device. Use **Backup & Restore** regularly to protect against data loss.
